## **Introducing the SAME Delfino: a concentrated package of productivity.**

Ultra-compact dimensions, superior comfort and outstanding versatility: these are the key strengths of the new SAME Delfino, the ideal tractor not only for agricultural tasks in restricted spaces and between narrowly spaced rows, but also for public park maintenance applications.

Available as both platform versions with a fold-down two-pillar front ROPS or with a comfortable four-pillar high visibility cab designed specifically by the constructor for this series of tractors, the SAME Delfino family is also offered as a special low profile version with rear tyres measuring just 20" in diameter, for even greater agility when working under the canopy. With extraordinary tractor and a huge choice of configuration options, don't be fooled by the small appearance of this the SAME Delfino: as its technical characteristics, mechanicals and performance bear comparison with those of its bigger siblings. From the open field to specialised tasks, the Delfino offers the most versatile multi-role capability in its class. With its class-beating weight/power ratio, the Delfino 60 is the best solution for applications where minimising soil compaction is crucial. Low vibration and noise levels and an intelligently designed interior, with a telescopic steering column and highly ergonomic controls, ensure excellent operator comfort in all conditions. The spacious driver zone and potent air conditioning system contribute to maximising on-board comfort, while the new design will please even the most discerning eye.

Compact, but boasting a generous unitary cylinder capacity, and featuring electronically controlled Common Rail fuel injection, the new engine powering the SAME Delfino family delivers 51 HP on Delfino 50 models and 59 HP on Delfino 60 models. The torque curves of these engines have been optimised specifically for agricultural tasks, municipal applications and park maintenance. With a total capacity of 2200 cm<sup>3</sup>, maximum engine speed is just 2600 rpm, maximising both reliability and fuel economy, while peak torque is already available at just 1600 rpm. Stage V compliance is attained with a DOC catalytic converter and a passive DPF diesel particulate filter (both of which maintenance-free), which minimise the impact of these powerplants on the environment with no penalties in terms of operating costs.

A sturdy and dependable fully synchronised transmission with 12 forward and reverse speeds (increasable to 16 +16 with the addition of the creeper gear) lets the SAME Delfino family deliver outstanding performance in any situation. The control levers of the transmission are situated ergonomically under the steering wheel. The top speed of 30 km/h, attained at low engine speed, makes for a less tiring ride when travelling between sites and transporting loads by road. At the opposite end of the speed scale, with the addition of the supercreeper gear, these tractors can work at maximum rated engine speed at ground speeds as low as 260 metres per hour. An impressive maximum steering angle offers superlative agility, while both differentials can be locked simultaneously by simply pressing a button to ensure outstanding traction even in treacherous ground conditions.

With class beating hydraulic systems, Delfino tractors can work effectively with a wide range of hydraulically operated implements. The base version includes a 30 l/min hydraulic pump dedicated to the 1200 Kg lift and the distributors (available with up to 6 couplers), and an independent secondary hydraulic steering circuit, for effortless steering and superior agility even at low engine speeds and when working with heavy loads. The rear lift with draft control makes it possible to tackle even the toughest jobs with seamlessly smooth control.

A number of configurations are offered for the rear PTO, while the different speed modes available are selectable from a practical, dedicated control in the driver zone. An optional 600 Kg front lift, installable together with an electronically engaged front PTO, and a 2000 rpm belly PTO further extend the versatility of this small but capable tractor.

---

**SAME. the history of Italian agriculture in just four letters.**

Since its inception, SAME has been an intrinsic part of agriculture, contributing to the growth of this sector with its tractors from the first Trattorice Cassani model in 1927 up to today's state of the art, technologically advanced machines. Every model is a faithful and tireless ally for farmers in Italy and beyond, in a versatile range of tractors for every application from the vineyard and fruit orchard to open field and general farmyard tasks.
